While modern books are born digital, books old enough to be in the public domain may never have seen a computer. Google has been scanning books from public libraries and other sources for several years. That means you've got access to an entire library of classic literature that you can read on the computer or on a variety of mobile devices and

their average discharge, that is, their water flow rate. Here, only those rivers are shown whose discharge is more than $2,000 \text{ m}^3/\text{s}$ ($71,000 \text{ cu ft/s}$). For context, the volume of an Olympic-size swimming pool is $2,500 \text{ m}^3$. The average flow rate at the mouth of the Amazon is sufficient to fill more than 83 such pools each second.
